Frederic H. (Ric) Martini received his Ph.D. from Cornell University in comparative and functional anatomy for work on the pathophysiology of stress. He is the lead author of nine undergraduate texts on anatomy and physiology or anatomy. Dr. Martini is currently affiliated with the University of Hawaii at Manoa and has a long-standing bond with the Shoals Marine Laboratory, a joint venture between Cornell University and the University of New Hampshire. Dr.

Martini is now a President Emeritus of the Human Anatomy and Physiology Society (HAPS) after serving as President-Elect, President, and Past-President over 2005-2007. Dr. Martini was a member of the HAPS committee that established the course curriculum guides for A&P. Michael J. Timmons received his degrees from Loyola University, Chicago. For more than three decades, he has had a strong commitment to teaching nursing and pre-professional students at Moraine Valley Community College (outside Chicago). In 2005-2006, Professor Timmons was honored with the Professor of the Year Award by Moraine Valley Community College and the Excellence award from the National Institute for Staff and Organizational Development for his outstanding contributions to teaching, leadership, and student learning. He has also been the recipient of the Excellence in Teaching Award by the Illinois Community College Board of Trustees. His areas of interest include biomedical photography, crafting illustration programs, and developing instructional technology learning systems. He is a national and regional presenter at the League for Innovation Conferences on Information Technology for Colleges and Universities and at Human Anatomy and Physiology Society (HAPS) meetings.

Robert B. Tallitsch received his Ph.D. in physiology with an anatomy minor from the University of Wisconsin-Madison. Since then, he has been on the biology faculty at Augustana College in Rock Island, Illinois. His teaching responsibilities include Human Anatomy, Neuroanatomy, Histology, and Kinesiology. In seven out of the last nine years, Dr. Tallitsch has been designated as one of a select number of "unofficial teachers of the year" by the graduating seniors at Augustana College. Dr. Tallitsch serves as a visiting faculty member at the Foreign Languages Faculty at the Beijing University of Chinese Medicine and Pharmacology (Beijing, China) and also at the Foreign Languages Faculty at Central China Normal University (Wuhan, China).

I have seen a few comments/questions regarding what is included with this textbook. I am hoping I can clear up some confusion. I just received the "Human Anatomy & Physiology, Books a la Carte Plus MasteringA&P with eText -- Access Card Package (9th Edition)". This package came with the Human Anatomy & Physiology textbook, A Brief Atlas of the Human Body, Interactive Physiology 10-System Suite (CD ROM), and the Student Access Code for Mastering A&P. If you need the whole package, this is the one to order. Also, it is important to note that the textbook comes 3-holed punched and you will have to put the pages in a 3-ringed binder. This book does not have a binding. I personally like this idea because if I know that we are going to be working on chapters 2 and 3 in class, then I only have to bring chapters 2 and 3 to class. I don't have to lug around the whole book. Also, it might be important to note that I ordered this book directly from and not from someone who

is using to sell their book. If you order the hardcover book, you will only receive the textbook. The hardcover book (at the time of this review) does not come with the Atlas, CD ROM, or the Access Code. When you read reviews, make sure to look at the review carefully to see exactly which book/package is being reviewed. When you look at the reviews for "Human Anatomy & Physiology" it will show reviews from people who received the hardcover book, the kindle book, and the 3-holed punched book. These reviews are all mixed together. The review will tell you exactly which book/package is being reviewed. Personally I think this makes it very confusing but if you look carefully you will find the information you need. UPDATE as of 1/30/2013 I have just noticed that is now selling a loose leaf edition without the full package. When ordering make sure you order "Human Anatomy & Physiology, Books a la Carte Plus MasteringA&P with eText -- Access Card Package (9th Edition)" if you need the full package. If it doesn't list "Mastering A&P with eText - Access Card Package" in the title then you are not going to receive the full package. Also, it seems like is making it more difficult to actually find this full package. If you search for just "Human Anatomy & Physiology", this full package is not going to come up in the search. However, if you copy and paste the full title: "Human Anatomy & Physiology, Books a la Carte Plus MasteringA&P with eText -- Access Card Package (9th Edition)", you should be able to find the correct package. I hope you find what you need. Now that I have started my class that uses this book, I can now comment on using the Loose Leaf version vs a Hardcover book. Overall I do like that I can take a few chapters to class versus taking the whole book. It's much lighter and I enjoy that. The only bad thing I have found about having the loose leaf version is that you have to be more careful with the pages. The whole book is 3 holed punched and needs to be put in a 3 ring binder. When turning the pages, if you aren't careful, you can tear one or two of the holes on a page. It's usually nothing a little tape couldn't correct but if you are the kind of person who is rough on their books, turns pages aggressively, throws their books across the room, then you might want to invest in the hard cover book.

I purchased this book a few semesters ago and it is a great text book. This text book you will want to keep for future references. With that said.. Do yourself a favour and just get the past edition. I returned my 9th edition. I just do not see the justification to charge someone almost \$200 for a new book when the previous edition is almost the exact same, with just replacing of pictures. The 8th Edition can be purchased for less than \$15 bucks here on (ISBN-10: 0805395695). I am pretty certain that most college students are pretty much on the verge of being broke, or soon to be for that matter. Always try to get the previous edition if you can, you save a lot of money, around 1/5

the price. These publishers just drive me nuts, I understand they need to make money, but come on, most of these books are never completely rewritten and they come out with a new edition every 2-3 years and those editions like this one, are almost exactly the same, except for replacement of pictures and a few updated stories/examples. It seems crazy how a book that is just two years old seems to be considered no longer usable.--*Update*: For most A&P students, your cover the first chapter all the way to the nervous system. In A&P II your probably start with the Endocrine System. Your professor may require you to get Mastering A & P. This requires that you use a on-line website that allows you to take some tests, quizzes and other exams. Getting the older book, will save you money, so you will be able to purchase the other software. The access code is \$55, if you want the eText/eBook included, then it is \$110 and that will include the 9th edition. The My Mastering A & P website, is good for 1 year. If you take AP1 in spring, you will still be able to use your Mastering A & P on the same access code if you take AP2 in the fall. Do not be fooled by changed pictures or rearrangement of chapters. Seriously, the human body has not changed in the past two years. We still have the same muscles and bones and, yes the kidneys still filter plasma. ;)

Used this book in A&P 1 and 2 I. Now I reference back to it while I'm taking a cadaver lab this semester. I had other medical books, but this was always the one that gave me more details and easier to understand. No its not going to be a medical atlas with in depth details you'll see in post health care professional schools, but for undergraduate it gets the job done. I have no issues and I even talked other students into getting it because it helps with our labs and lectures.

I bought this book with an eye to educate myself on human anatomy and physiology. I wanted a systemic view of the entire body and systems and this book has not disappointed. It is written at a college level and if you are looking for a "wiki-level" view of anatomy this is probably overkill for you. If you are looking for a comprehensive undergraduate level of knowledge then this is a good start. I did purchase used and there are lots of highlighter marks on pages but I was looking to save money so they don't bother me.

This book has helped me a lot in my gross anatomy course. When I'm not in the cadaver lab or even when I am and I need a quick reference to help me identify structures, this book has been the best. Some of the other books that have cartoony drawings don't always translate well to the human body. Being able to see pictures of real cadavers helps. I would recommend this book for anyone taking an anatomy course where you identify things from a cadaver or cadaver pictures.
