TownÃ Â Date: July 2015 "This is an essential resource to have on a wilderness adventure as it provides people with minimal formal medical education recommendations for caring for fellow travelers with medical emergencies. It packs a significant amount of information into a book that is small enough to take into the wildernessÃ¢âÂ" -Maria Kristine Goertz, M.D. (Regions Hospital and Level 1 Trauma Center)

Dr. Paul S. Auerbach, FACEP, FAWM, is the Redlich Family Professor of Surgery in the Division of Emergency Medicine at Stanford University School of Medicine. Dr. Auerbach holds his MD from Duke and completed his internship at Dartmouth and residency at UCLA. He is certified by the American Board of Emergency Medicine. He has been recognized as a Hero of Emergency Medicine by the American College of Emergency Physicians and received the New Orleans Grand Isle Award for Science from the Academy of Underwater Arts and Sciences, the Founders Award from the Wilderness Medical Society, and the Outstanding Contribution in Education Award from the American College of Emergency Physicians, among others. Dr. Auerbach has served as a volunteer physician in Haiti, Nepal, and Guatemala.

The book was a gift for my boyfriend for Christmas, and he absolutely loves it. It was excellently wrapped and in perfect condition when we received it. It's very interesting to flip through, and makes a valuable addition to our bookcase/go bags. We hike all over the Northwest, and we always bring this book with us. The book consists of five parts- general information, major medical problems, Minor medical problems, disorders related to specific environments, and miscellaneous information. The book is very well written and structured. Some of the more detailed aspects of the book include allergic reactions, emergency childbirth, amputation crisis, head injuries, infectious diseases, respiratory and inner organ disorders, tornado, hurricane, flood and other natural disaster emergencies, hazardous aquatic life, wild plants & animals, water purification and much much more. It also has tons of diagrams and examples for clarification for some of use who are more visual learners. The book is small enough to easily be put into any SHTF backpack. It measures right under an inch as you can see in the photos. This is definitely an essential source for survival and staying healthy in the outdoors; wherever your travels will take you this book has something you can benefit from! You won't regret it!

I reading this the second time as there is so much good information to try and absorb. I find that it provides a good balance between things that you can attempt on your own and when you should head to the emergency room right away. I believe this book is very well suited to have in your library as a reference. If you find yourself needing it right away as in an emergency, the text is not suited for quick on the spot prognosis of most ailments. You need to have read this book in advance and really understood the things that he is describing.

Well written, authoritative and concise.

Quick source of information!

brother in-law uses it all the time working with the boy scouts

Packaged well, arrived quickly -- thank you! Great book.
