My sister in-law died from cancer a few years, she is the first person in my family to die from cancer. I remember every time she returned home from her treatment in Puerto Rico she would be ill. When she eventually felt well again she had to return for treatment. It was a rough battle for her and her body eventually gave in. To be honest even though there is a lot of talk about this disease I am not very educated on the topic. After reading this book, for the first time I now have a better understanding about cancer and how the food we eat affects our bodies. It is so important that we are all mindful of what we put into our bodies. I appreciate that the author took the time to do this detailed research to list the various foods that someone suffering with cancer should and should not consume. Very valuable information. Brad also lists some great recipes making it easier to prepare meals for cancer patients.

This was a very interesting book, with a lot of useful information of food to include and exclude from your Cancer Diet. Instead of living in despair and hopelessness, it is no harm in going on a cancer diet in consultation with your physician, and get a more optimistic attitude and hopeful thoughts that in itself can be to the better. This is important for everybody, not only for those with cancer, but for

all of us to prevent getting this terrible disease. The book also has some very good recipes for breakfast, lunch and dinner. I highly recommend this book for everybody.

Scientists now believe one of the main contributing factors for Cancer is excess insulin in the blood. Not just Insulin but also all the processed junk our society as a whole consumes these days. This book explains this in an easy to read way. It shows you how our lifestyles contribute to not just cancer but most of the diseases people have these days. The book goes into detail about what you should and shouldn't eat and why. At the end of the book you have a number of healthy recipes to choose from. This book is a great overall guide to eating a healthier diet in general!

I'm a firm believer in that if you feed body with proper nutrition and have sufficient rest and exercise, your body can heal itself if it has the necessary nutrients, vitamins and minerals. Even the dreaded cancer. Yes, it sounds incredible, but after you've read this book, it will make sense. Cancer cells are basically mutated cells that grow/multiply like crazy - and they need energy (glucose) to multiply. If you cut off the energy supply, then you can starve the cancer cells. This book gives you the background of the diet, why it works and how it works. And the author completes it with 20 delicious Cancer Diet recipes for breakfast, lunch and dinner.

I bought this book because I lost a couple of dear friends last year and I realized how important it is to have a healthy lifestyle. I'm also a firm believer that we are what we eat. The author did a great job providing useful information and I've already prepared a few lunches inspired from the book. I can only recommend this guide.

With so many cases of cancer, one can often wonder what on earth do we eat these days. We need to learn how to cancel out of these leading cancer causing agents by using healthy ingredients and eat home cook foods more often. This book offered some pretty good & healthy recipes. The book was well formatted which made it easy for me to refer to specific ingredients.

This is one of those books you never want to use and I haven't luckily had to use the recipes in this book. But I bought it anyway just in case and to be prepared. I have heard over and over the best medicine you can take is your food a healthy diet. So for the price of the book to be ready.

The book gives a list of foods not to eat. Then almost all 20 meals have something from the do not

eat list!
