This volume present close-up views of some of the world's endangered animals. It contains 50 four-page entries arranged according to location (six continents plus the oceans) and offering vivid visual presentation. Entries provide profiles of each animal as well as a synopsis of its threats and conservation. All entries contain a sidebar of "Key Facts" and a map showing where each animal can be found in the wild. Each geographic section is prefaced with a short introduction about the area and the animals that can be found there. Although the entries are visually appealing and contain some nice introductory material, the volume is limited by a lack of in-depth content and further-reading suggestions. Also, there is no explanation of why the particular animals were selected. The illustrations and easy-to-read style make both this suitable for young adults, but libraries may want to seek out other titles for students who need more than just an overview. Grades 6-10. --Asia Gross

This book is a must have for any educational book collection. There is a lot to learn and it is beautifully set up. My kids and I love this book.
