I purchased this book for my children to aid in identifying our backyard birds. The book contains beautiful color photographs as well as descriptions of each bird. I've had this book for years and it is lovingly showing wear due to the number of times it's been used. I wouldn't hesitate to purchase it again.

Like this book because it is specific to Minnesota. It is short and compact. I don't have to look through thousands of birds to find what I am looking for. Also love that it is sorted by color -- brown birds, yellow birds, etc. How well do I like it? I keep replacing it when the one I am using wears out. This is my third copy.

We are studying birds in school and this book has really helped us identify many of the more common and some not-so-common birds in our area. I like how the book is laid out. It's colorful and the pictures are great for helping id birds and their mates. It is also organized by color so kids are able to find the birds fast. We get lots of birds on our feeder and this book has been great for quickly finding the types of birds that are in our yard. It also has other helps to such as what kinds of nests the birds use, where they are located in MN, color of eggs and how many, as well as notes from the author about each bird. This book is a great help to anyone who needs a little help identifying local birds.

This is a great bird guide for the new birder or the casual observer. Unlike many other identification guides, which rely on your previous knowledge of bird species, this bird starts the identification process the way "normal" people do: By color. "Oh I saw this cool green bird!" your friend might say to you, well, turn to the green bird section and start flipping through. Another thing that I like about

this field guide are the photographs. They show the male and female of the birds, but not always what it looks like in flight, which is a definite drawback. What makes this book great for the beginner also makes it less useful for a more avid birder. There is less information, and generally birds are photographed in stationary positions i.e. not flying.

This was a book for our 9 year old Grandson as he likes to identify all the birds at the cabin. It's a very good book & tells everything about the birds.

It was given as a gift to my Aunt, She loves it and finds it is an easy book to help her Identify the birds she sees in her yard.

This is great because it has actual photo pictures rather than drawings.

best little book for birds in MN! Best price I found!
